

Html – hyper text markup language

Html is based on tags (tag is <>).

Every html page contains this basic content:

```
<!DOCTYPE html>
```

```
<html>
```

```
  <head></head>
```

```
  <body></body>
```

```
</html>
```

Example for *html tag* that creates a header:

```
<h1> ↓ </h1>
```

here we will write the content of the header

Create a first html page

- 1) Open notepad and write this content:

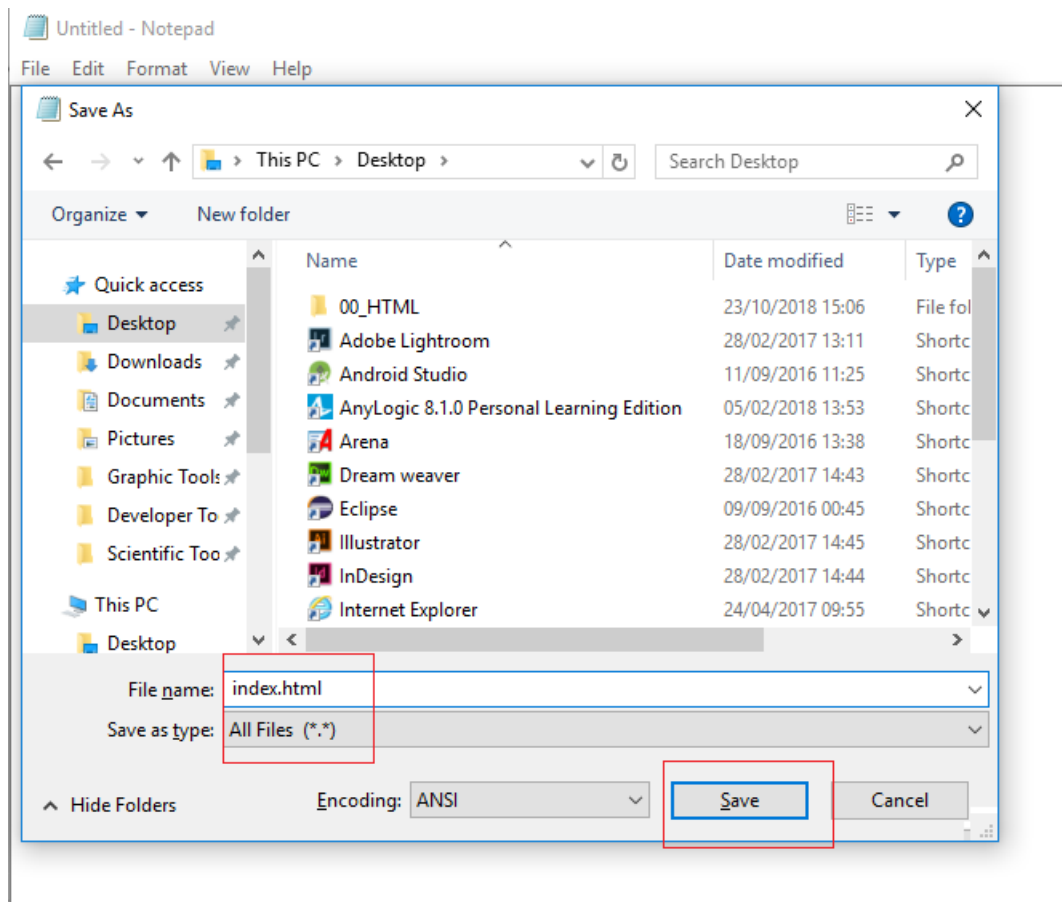

```
index.html - Notepad
File Edit Format View Help
<!DOCTYPE html>

<html>

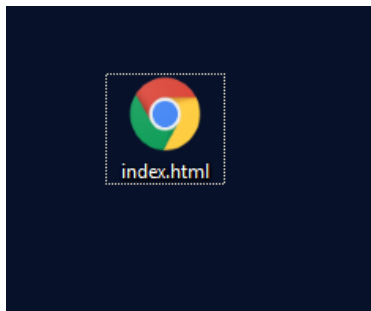

<head></head>
<body>
<h1>HELLO WORLD</h1>
</body>

</html>
```

- 2) Save the page as "index.html"

3) Go to the location that we saved the page in prev step:

4) Click twice on the icon, and the file will open in the browser.
Then press F12 to open the "development tools" (in chrome)
